

## Osteotomy testimonial

I injured my knee many years ago playing volleyball. Since then I have had four separate operations to fix my cruciate ligament and repair torn cartilage in my knee.

I went to Sean with severe pain in my knee joint when walking. I had low expectations and felt anxious about the possibility of needing a knee replacement. Sean was very professional and explained exactly what was causing the pain. We discussed all the procedures and options available and was very happy to be offered an Osteotomy, something I had never heard of before.

I was nervous about the operation, but Sean was very reassuring and professional, which gave me confidence in him and the team. The operation went better than I could have imagined. The post-op care and professionalism of the team, along with well administered pain relief helped considerably with my quick recovery.

I am very happy with the result, as I can now walk for long periods without pain.
